**100**

FIRST RUN UNITS

# INTRODUCTION

**Roswell Rifle Works** is proud to introduce the **first U.S.-made SR-3M**, engineered to mirror the original Russian platform while meeting modern manufacturing standards.

The SR-3M is one of the last evolutions of the 9x39 family of weapons. The rifle has been fully recreated using precision U.S. machining, modern materials, and extensive ballistic testing, while remaining faithful to the original Russian design.

*"We've completed the first full U.S. builds and we're now in the refinement phase. We found additional ways to simplify and strengthen the design for long-term production, while staying true to the original design. Instead of rushing extensive live fire testing, we chose to optimize our design for future scalability. That's exactly where you want a serious program to be."*

This is the moment when a cool replica becomes a real production gun.

# AUTHENTICITY

Roswell Rifle Works' SR-3M US is built to a **95% dimensional match** to the original Russian SR-3M.

Key architecture – including the receiver, gas system, bolt carrier group, folding stock, trigger pack layout, and locking surfaces – All stay true to the original design.

## ONLY FOUR INTENTIONAL CHANGES

1. Semi-auto fire-control configuration (U.S. legal compliance)
2. Replacement of the original Russian 3-lug suppressor mount with a modern 14×1 LH threaded barrel
3. Addition of MLOK sections to the handguard for modern attachments
4. Removal of the pistol grip for non-NFA versions of the weapon and creation of a lower handguard to replace the integral front-mounted pistol grip

**No other design alterations were made.**

# ENGINEERING REFINEMENT STATUS

As the SR-3M US transitioned from CAD and historical reconstruction into full U.S. CNC production, Roswell Rifle Works completed its first full domestic builds and entered refinement phase—the final step before extensive full live-fire validation.

During initial manufacturing, several components were identified as exceptionally complex to machine in a modern U.S. production environment, in some cases requiring **30+ individual tool paths per part**. While historically accurate, this level of complexity offered opportunities for refinement to improve repeatability, serviceability, and long-term support.

Rather than rushing ahead, Roswell Rifle Works made the redesigned several parts of the internal components for manufacturability while preserving the rifle's original geometry, operating principles, and external form. These refinements strengthen the platform's readiness for scalable production and sustained use.

**This phase reflects progress, not delay**—and is exactly where a serious, first-of-its-kind domestic weapon system should be prior to final validation. The program remains on track as these refinements position the SR-3M US for reliable live-fire testing and long-term production success.

## SUPPRESSOR SYSTEM

The original Russian 3-lug/tri-lug suppressor mount was incompatible with modern U.S. suppressor standards.

Roswell Rifle Works decided to thread the barrel 14×1 LH. Allowing the end user to use a muzzle device or suppressor of their choosing. This allows for the use more efficient suppressors.

## AMMUNITION

The SR3M US is chambered in 9×39 US. The 9x39 US is a caliber specification engineered by Roswell Manufacturing.

They created the 9×39 us standard because “9×39” was never actually standardized in the U.S. Different ammo, barrels, and tooling were built to conflicting specs, creating safety and reliability problems. 9×39 US is a pressure-tested, dimensionally consistent baseline designed specifically for the U.S. market, modern manufacturing, and suppressed use.

### KEY POINTS

- Our 9x39 US spec barrels are fully compatible with Russian Wolf and Tula 9x39mm

- Our ammo is manufactured in the U.S. using Starline brass, thus making it reloadable unlike the tradition steel case ammunition
- Roswell Manufacturing is the primary U.S. producer of 9×39mm ammunition
- Extensive pressure testing was performed during development
- Roswell Manufacturing provides load validation and testing services for third-party bullet developers

## CURRENT OFFERING

- 278-grain subsonic 9×39 US (optimized for suppressed use)
- 310-grain subsonic solid copper expanding round (projectiles supplied by Maker Bullets)

## IN DEVELOPMENT

- Full metal jacket (FMJ) variant

Ammunition is available now at [RoswellMFG.com](http://RoswellMFG.com).

## MAGAZINE COMPATIBILITY

The SR-3M US accepts:

- ✓ Original **Russian SR-3M / VSS / AS-VAL** magazines
- ✓ Domestically designed and produced magazines by Roswell Rifle Works, to work and look like the original VSS magazines.

No proprietary or redesigned magazine geometry was introduced.

## MANUFACTURING ORIGIN

**Every component of the SR-3M US is 100% U.S.-made.**

No foreign parts are used in the receiver, bolt carrier group, barrel, stock system, springs, or internal component.

Key components – such as the bolt, carrier, and receiver – require **high-end multi-axis machining systems** that exceed the capabilities of most commercial shops. This level of manufacturing complexity with the additional fact that no blueprints for this firearm is available, has historically prevented any U.S. company from attempting a true SR-3M build.

## PARTS & ACCESSORIES

---

### AVAILABLE AT LAUNCH

- Magazines - 20rd, 30rd
- 9×39 US barrels (chambered and reamed)

Additional parts will be released in phases based on demand.

Replacement components are prioritized for SR-3M US customers.

Roswell Rifle Works is collaborating with third-party manufacturers on accessories and furniture for the SR-3M/VSS/VAL platform.

## OEM & CONTRACT MANUFACTURING

---

Roswell Rifle Works maintains an OEM strategy and is open to OEM/contract manufacturing discussions with qualified partners. These conversations will begin **after SHOT Show 2026** through a structured evaluation process.

## VARIANTS

---

Roswell Rifle Works is **not announcing additional SR-3M/VSS/VAL variants or calibers** at this time.

All future development programs will be announced at the appropriate stage.

## AVAILABILITY & FIRST PRODUCTION RUN

---

**100**

UNITS IN FIRST RUN

**NO PRESALES**

Rifles released only when complete

Customers may sign up for availability notifications and join our journey at:

**RoswellRifleWorks.com**

**Estimated initial availability:** 90 days from SHOT Show 2026 - subject to change based on manufacturing and production delays

## CONFIGURATIONS

- Pistol configuration
- SBR configuration
- Additional caliber options
- Integrally-suppressed configuration

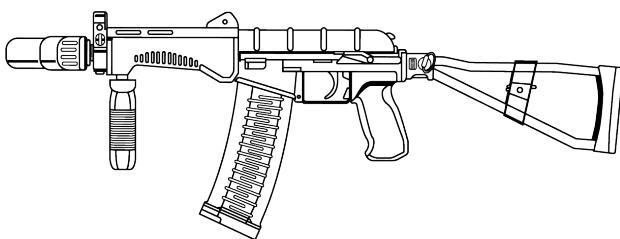

## WHY THIS RIFLE IS UNIQUE

The SR-3M was **never exported, never licensed**, and **no parts kits have ever existed**.

Prior U.S. attempts focused only on cosmetic VSS-inspired designs. **Roswell Rifle Works undertook a complete reconstruction** of the platform from incomplete and often contradictory diagrams, validated every tolerance, and built the first authentic, functional SR-3M US ever produced in the United States.
